General Comment

I agree that as a matter of national security and the nation's economic security that the U.S. needs to be at the forefront of innovations and the protection of those innovations. Admittedly, AI is a beast that will be hard to control and much like our republic only viable when moral people are at the helm. Who can guarantee that LLMs will be unbiased? Who are the gatekeepers of this information? Never underestimate the laziness of government, commerce, and individuals.

I am concerned about the displacement of humanity. Both my sons are currently in college, and we already their future job opportunities potentially being replaced with advances in technology and AI. The future does not look bright at all for some individuals. I know that this is not something that can be legislated, per se, but it certainly needs to be taken into consideration. I know I sound like a farrier at the advent of automobiles.

Good luck and I pray for enlightenment on this matter.
