Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-0935

Comment on FR Doc # 2025-02305

Submitter Information

Name: Zach Mansour

Email: [REDACTED]

General Comment

Good Morning!

Happy at the opportunity to comment on this subject. My biggest worries for AI stem from access to weaponry and replacement of humans in the work economy. AI must never have access to the nuclear arsenals of our country or others. AI is marketed as an addition to the human workforce and to make our lives easier. It is very clear that AI will take many jobs regardless of what the Silicon Valley startups claim to their investors. Even if AI automates away the "mundane" tasks of many companies or organizations, those mundane tasks currently put food on the table for people across the country. Without serious leading by our policy makers on creating job opportunities in step with the rampant development of AI, many people will be left behind. I do see how AI can benefit us in many ways due to its quick computation and flexibility amongst varying tasks. But AI is a technology similar to CRISPR in that a serious divide between the haves and have nots in society could widen. It should be treated as a tool and not a Saviour. AI does not have a soul like we as humans do and should not be seen as more than it is.

Thank you for your time! Goodluck.
