General Comment

Narrow AI (ANI) is an invaluable task-specific intelligence. I welcome ANI and use it, but users must have the right to designate data sources by type, plus the ability to include and exclude specific sources manually. For example, to exclude the Google.com index from all query searches due to its extensive political bias.

Also, all online ANI apps must be mandated to perform Tor browser-level anonymous data searches without sharing personal information, IP address, or anything else.

General AI (AGI) matches or exceeds human intelligence across diverse tasks, demonstrating reasoning, creativity, and self-improvement. The concern is that AGI is created in the image of its maker, and if that maker is evil, so will its AI progeny.

The threat with AGI here is the creation of a real-life Skynet, as featured in the Terminator movies, which represents a clear and present danger to humanity. Those who pursue its development should be prosecuted as vigorously as those who keep child pornography on their computers.
