General Comment

All information about AI (artificial intelligence) should be taken with a grain of salt. The gains that "AI" has made in recent years have been mild at best, and really only serve to drain the wallets of speculative investors, while the actual "AI" product provides no actual value besides weak gimmicks. That all combined with the fact that "AI" server farms take an enormous amount of energy from our power grid, while providing nothing of actual substance.

The use of the term INTELLIGENCE in AI also implies that these programs have intelligence, but truly, all AI does is re-word and re-create information that has been fed into it's algorithms, this information, which is commonly stolen from actual human creators.

The current state of "AI" is nothing more than an automatic thesaurus, copying work from others the same way a lazy student would copy the homework of their peers, providing nothing of value to the populace.

Instead of giving speculative "what-if" investing into "AI", that money should be going to improving the wellbeing of the citizens of this great nation, and the people of the world.
