General Comment

Issuing a stark warning about AI, Elon Musk had also suggested that the technology could pose a bigger threat to the world than a nuclear war with North Korea. In the Twitter post, he had used an image carrying the words – In the end, the machines will win.

“Mark my words, AI is far more dangerous than nukes...why do we have no regulatory oversight?”

The head of DOGE, Elon Musk says, "Mark my works, AI is far more dangerous than nukes..why do we have no regulatory oversight?".

So keep that in mind President Trump.

Elon Musk also said this about AI, “I am not normally an advocate of regulation and oversight...I think one should generally err on the side of minimizing those things...but this is a case where you have a very serious danger to the public.”

He called AI "a very serious danger to the public".

Elon Musk quote:

“I have exposure to the most cutting edge AI, and I think people should be really concerned by it...AI is a fundamental risk to the existence of human civilization in a way that car accidents, airplane crashes, faulty drugs or bad food were not — they were harmful to a set of individuals within society, of course, but they were not harmful to society as a whole.”

He called AI, "a fundamental risk to to the existance of human civilization".

The national science foundation will review this comment.

Another Elon Musk quote:

“The biggest issue I see with so-called AI experts is that they think they know more than they do, and they think they are smarter than they actually are...This tends to plague smart people. They define themselves by their intelligence and they don’t like the idea that a machine could be way smarter than them, so they discount the idea — which is fundamentally flawed.”

Elon Musk said, "so-called Ai experts think they know more than they do and they think they are smarter than they actually are."

Clearly Elon Musk thinks AI is a massive threat.

Will the so-called experts ignore Elon Musk's warning and others?

Here is my own suggestion President Trump.

Add a fail safe AI KILL SWITCH to your action plan just in case this AI Powerhouse you are creating decides to take full control and put us all at risk!

Elon Musk quote, "a fundamental risk to the existence of human civilization".

Recommendations for a More Balanced Approach:

Maintain Certain AI Regulations – A balanced regulatory framework that ensures safety without overburdening the private sector should be considered.

Stronger AI Risk Management & Accountability – Policies should include mandatory risk assessments for high-impact AI systems, similar to global AI governance approaches (e.g., the EU AI Act).

Government & Industry Collaboration – Public-private partnerships should be encouraged to ensure innovation aligns with ethical AI development and security standards.
