As of: March 21, 2025
Received: March 07, 2025
Status: [REDACTED]
Tracking No. m7z-6bms-otdw
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1102

Comment on FR Doc # 2025-02305

Submitter Information

Name: Alexander Michael

Email: [REDACTED]

General Comment

Although proprietary AI technology is great for US power, we have seen that open source AI can literally topple markets. xAI releases the old Grok model open source whenever it creates a new one. This is a great way to limit our competitors and I think we should be doing everything we can to help the open source AI community. By making models that compete with our competitors free we give the world tantalizing alternatives to AI models that would compete with our own allowing us to slow down the growth of their AIs. At the same time, by fostering innovation in our most powerful models with the massive amounts of resources available in the US we can stay ahead with our proprietary models. By creating the best environment possible for open source models in the US we can create a two pronged approach for keeping competition outside the US at bay. One prong giving free alternatives to our competition and one prong offering the best of the best through US companies. We need to foster as much innovation as possible in the US open source AI space. This could be done by investment in universities and research institutes.
