

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 12, 2025
Status: [REDACTED]
Tracking No. m86-g5xq-txeu
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1164
Comment on FR Doc # 2025-02305

Submitter Information

Name: Adam Scholl

[REDACTED]

General Comment

I work on AI alignment research, which is unfortunately still a basically-wholly unsolved problem. By which I mean not just that it is a hard problem, but one which we still have roughly no idea how to even try to solve.

I started working on this in 2016, when it was unusual to be concerned about the risk of human extinction from AI. Today it is more unusual to find top researchers who are unconcerned about this than the reverse, and most prominent AI researchers have signed public letters stating that they consider it plausible that unaligned AI may soon destroy all life on Earth.

From my perspective, it seems insane that the government does not currently regulate frontier AI models as weapons of mass destruction, nor even try to prevent their construction and proliferation. Not because currently-available systems are dangerous—they're still pretty harmless—but because we have strong reason to suspect they will become dangerous someday, and no particular reason to think that day won't be soon.

To whoever may be reading this: I implore you to do what you can to help protect Americans (and indeed everyone on Earth) from this terrifying threat.
