As of: March 21, 2025
Received: March 12, 2025
Status: [REDACTED]
Tracking No. m86-g5hz-dnbi
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1166
Comment on FR Doc # 2025-02305

Submitter Information

Name: Kerry Macintosh

[REDACTED]

General Comment

Dear Networking and Information Technology Research and Development (NITRD) National Coordination Office (NCO):

This comment responds to your request for input on the Development of an Artificial Intelligence Action Plan (Plan). You have asked for priority actions that should be included in the Plan.

Science fiction has persuaded the public that AI is an existential threat. This illusory threat encourages government to overregulate the technology. For example, recent proposals for pauses, moratoria, and licensing schemes will harm American innovation and competitiveness, and should not be included in the Action Plan.

I develop this argument in my article, "Rogue Artificial Intelligence, Science Fiction, and the Law," which will appear in Volume 41, Issue 1 of the Santa Clara High Technology Law Journal. The article will be published online shortly. Please consider it in your deliberations.

Thank you for considering this comment.

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

NITRD NCO public comment

Dear Networking and Information Technology Research and Development (NITRD) National Coordination Office (NCO):

This comment responds to your request for input on the Development of an Artificial Intelligence Action Plan (Plan). You have asked for priority actions that should be included in the Plan.

Science fiction has persuaded the public that AI is an existential threat. This illusory threat encourages government to *overregulate* the technology. For example, recent proposals for pauses, moratoria, and licensing schemes will harm American innovation and competitiveness, and should *not* be included in the Action Plan.

I develop this argument in my article, “Rogue Artificial Intelligence, Science Fiction, and the Law,” which will appear in Volume 41, Issue 1 of the Santa Clara High Technology Law Journal. The article will be published online shortly. Please consider it in your deliberations.

Thank you for considering this comment.

Kerry Lynn Macintosh

Inez Mabie Distinguished Professor of Law

Santa Clara University School of Law

Let's start outlawing AI agents on all levels now, put safety standards in place. The AI industry itself begs to be regulated for years now, they have market forces forcing them to be reckless if we'll not put external guidelines to make them all follow safety standards. Right now the one who is the most reckless wins, by building quickly and dirty instead of thoughtfully and carefully.

We need to cooperate internationally in order to make GPU companies that make hardware for AI to have mathematical guarantees that they cannot be used for AI agents, only for non-agentic AIs. We need to cooperate with China to force North Korea not to develop AI agents, too. We'll need to burn current GPUs that allow AI agents and give people some discounts to replace them with non-agentic GPUs.

It's already almost too late to stop the AI agents. We shouldn't lose hope and we should use this hope to act now.

Wish you the best luck and thank you! What you do is very important!
