As of: March 21, 2025
Received: March 13, 2025
Status: [REDACTED]
Tracking No. m87-evbo-b105
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1179

Comment on FR Doc # 2025-02305

Submitter Information

Name: Greta O'Brien

[REDACTED]

General Comment

My name is Greta O'Brien and I am a graduating senior at Avonworth High School. I researched the impact of generation AI on high school girls' basketball for a semester course and recently studied this administration's viewpoint on AI regulation. Based on my two months of studied research, I think that AI is a powerful tool that can take over if no controls or limits restrict AI abilities and enhancements. Many aspects of basketball are changing with the introduction of AI, and computer vision has had the biggest impact overall. Scouting apps like Hudl bring a new level of advanced statistics, reports, and game/player analysis. This has been very beneficial for coaches to feel prepared to play against their opponents without dedicating hours of deep-diving articles and websites. Shooting machines are also taking a sturdy position in not only being a catch and release to help shooters get more reps, but they have now advanced to personalizing workouts; Dr. Dish is one of the most advanced shooting machine distributors. All of those aspects of the game are very helpful for advancing your game, however, the conflict with bringing AI into high school girls' basketball is bringing AI to games. AI-Generated Referees can be the turning point of the game. If you play competitive basketball, you know that one of the most game-changing and exciting (or detrimental) parts of the game was the calls the refs were calling, it can either help or hurt. If AI is introduced that will completely shift the game from a free, fun, exciting game, to being highly calculated. As an American we are blessed to be in a free country with such smart people who put their skills to use and change the world, however, there needs to be limits. If something as small as high school basketball will be affected by AI then millions of other aspects of life will be changed as well.
