As of: March 21, 2025
Received: March 13, 2025
Status: [REDACTED]
Tracking No. m87-kbz7-k96v
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1185

Comment on FR Doc # 2025-02305

Submitter Information

Name: Grace Schmigel

[REDACTED]

General Comment

My name is Grace Schmigel, and I am a high school student, about to graduate from Avonworth High School. I researched the impact of Generative AI in the world of Paleontology and related Earth sciences for two months, in a course called AI and Ethics. Based on my research, I think that the new viewpoint on AI regulation from this current administration will benefit human flourishing, as long as the viewpoint remains worker-focused. From my research, I learned that the biggest threat AI poses to Paleontology, and the scientific community in general, is stealing jobs. I've seen how AI can replace entire production teams to create a documentary, and I have also seen how AI has physically replaced museum docents in leading paleontological institutions. Another problem that could occur through the use of generative AI in paleontology is creating or spreading misinformation. When used as a research tool, based on its mathematical algorithms, AI could generate false information or spread outdated information. This is could be a real concern for almost any research-based field, since AI has been proven to have flawed logic skills. If innovation is valued higher than regulation, I believe that the logic skills of AI could improve. As long as the viewpoint of the government remains protective of workers and jobs, I believe that this is a positive change.
