As of: March 21, 2025
Received: March 13, 2025
Status: [REDACTED]
Tracking No. m87-krgh-r7b2
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1192

Comment on FR Doc # 2025-02305

Submitter Information

Name: Lucy Jacobs

[REDACTED]

General Comment

My name is Lucy Jacobs and I am a 2nd semester senior at Avonworth High School. I studied generative AI and its impact on writing for television for two months in a course on AI and Ethics this year. From my research, I think current administration's viewpoint on AI regulation is contradictory. A very important value of the republican party is creating new jobs, but by fully supporting AI unregulated, AI might take more jobs that it can create. Every aspect of life should be met with some moderation to create a healthy balance between discipline and indulgence. That's what makes the good parts of our lives so good, that we occasionally experience it, and therefore adding more value to it. Though I don't believe AI has the talent or creativity to fully replace screenwriters in television, it certainly has the capabilities to be abused by humans in that field. By allowing AI to become fully unregulated, the Trump administration isn't allowing television to ever be the same, for better, but mostly for worse. Recently, movies such as Emilia Perez and The Brutalist have faced controversy for using AI in their films for voice modulation. This serves as an example that productions are taking shortcuts rather than hiring people that can actually do what is asked of them. AI was used in Emilia Perez to polish high notes the actors would sing, but there exists singers who already can hit high notes without the use of AI. In the Brutalist, AI was used to make Hungarian speaking characters sound more accurate, but there exists excellent actors who can speak English and Hungarian. Controversies like these will only be worse and more frequent without any regulation of AI in film and television, because nobody will feel the need to take any accountability. Artificial Intelligence has the potential to innovate without costing people their jobs or their integrity. Regulations wouldn't mean hindering all innovation for AI, it would just mean restoring the balance between work from humans and work from computers.
