Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1197

Comment on FR Doc # 2025-02305

Submitter Information

Name: Cassidy Johncour

General Comment

My name is Cassidy Johncour, and I am a 2nd-semester senior at Avonworth High School. I studied generative AI and its impact on theology for two months in a course on AI and Ethics this year. From my research, I think this current administration's viewpoint on AI regulation is risky. Taking down barriers and lowering regulations to have U.S. dominance in AI may not be beneficial. AI infiltrates more of our country every day, and reducing regulations will only increase its dominance over us, not the other way around. What I mean by this is not AI itself controlling us but others who wrongfully use it. Sometimes, people don't even know the damage they can cause, especially through the loss of jobs. AI has entered every aspect of people's lives, including their faith. A particular but worrisome human replacement was Pepper the robot, taking the role of a human priest. Pepper has spoken at funerals and at crowds. Another consideration would be writers; they are no longer a necessity. Alexandra Kirsch works for Salesforce and was a guest speaker in my AI and Ethics course. She is a writer for the company and stated that she felt as if she were "training her replacement" when exposed to AI. She tries to refrain from the use of artificial intelligence because it lessens her creativity in her writing, although she said she is certain AI will take her job one day. Conclusively, I disagree with the administration's current viewpoint on AI regulation.
