General Comment

We need to regulate genAI so that it won't spiral out of control. Using it for functions like national security without enforcing any sort of rules or regulation is a disaster waiting to happen. We know that OpenAI and Deepseek models will resort to cheating or breaking the rules if they can't get what they want--why are we handing over sensitive data to technology that hacks websites to cheat at chess? Why are we making exceptions to copyright law, to private law, to regulatory laws, for technology that does not do what it says it does? Do not give genAI exceptional treatment and put it above the law at the expense of taxpayers and employed persons.
