General Comment

If we're going to blatantly ignore copyright law for the purpose of advancing a technology it CANNOT be for the benefit of private corporations. Any LLM that is trained using indiscriminate data must only be as a part of a public works project. The training data should be disclosed, the model and it's weights should be open, and the training methods and source code must be open source. If the people are contributing their work (in the form of their data) then this technology needs to belong to the people.

Reject any plan that benefits individual corporations over the American people.
