

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 14, 2025
Status: [REDACTED]
Tracking No. m89-01is-pgya
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1367

Comment on FR Doc # 2025-02305

Submitter Information

Name: Casey Smith

[REDACTED]

General Comment

Genuinely, we are playing with fire by giving AI control over everything. With it, we could potentially ruin millions of Americans careers if AI is implemented into everything in this "AI race". With the way the data is fed into the machine, it's unethical, it's the equivalent of feeding a toddler hormones to make them grow faster; feeding AI just anyone's data is horrible. Why would the average American, someone who works 40 to 60 hour work weeks, want to feed their own private and intellectual information into a machine designed to not "stream line their job", but to be a complete replacement. Several corporations are already going the route of completely replacing humans as workers; in stores we have self check outs with maybe one or two people working, whereas in the past, we would have a fleet of people ready to work. When we go to get food, we skip over the human interaction and tell a machine our order and hope its right.

Recently, there was a study that tested AI in the medical field, it was found that it skipped over SEVERAL underlying and progressing illness that are potentially fatal without treatment! Why would we want that? Your platform is on "making us healthier again" but you want to use a machine that is designed to undermined doctors that spend over 10 years in school and hundreds of thousands of their own money to learn the what, why, and how of medicine. Myself, and several others in my personal life would opt-out this system if it ever came to fruition (if that would even be allowed as an option).

The same with artists, graphic designers, painters, film makers, and musicians. Right now, they are ALL being undermined by generative AI! I've spoken with and met artists that lost clients because generative AI is "good enough" for them. It's not a matter of "oh we're stream lining the art industry!"; it's more like "OOoooooh! Let's feed these peoples art work into generative AI WITHOUT THEIR PERMISSION and make crazy bank off of this!"

There is no critical thinking here! There is no skill or trade being learned; and eventually, artists will be forced out of their place in our society.

AI also requires a good bit of computer power, server power, and the good ol' internet to work as well. What happens to AI if we have a country wide outage due to a cyber attack, which we are obviously not safe from. What if your data banks are stolen or transferred by a foreign power and is used to train their own AI? Then it suddenly doesn't matter anymore if our AI is more advanced because someone else has the same thing now!!! What if we get hacked and suddenly someone changes a random piece of software or just drops a virus in the whole thing? Then we're starting at step one *again*.

AI is a product of rocks that we humans tricked into thinking. I think AI needs to stay out of our government, hospitals, media, and everything else. The fact that AI assistants have their own language they speak in that is incomprehensible to humans and takes seconds to send back and forth is a terrifying thought. The fact that we have generative AI that is able to alter it's own code is right out of the Terminator.

Please, I urge you, think about the dangers of AI in the long run. Think about how our society will grind to a halt if everyone is jobless. If we don't have money, how are you going to get money out of us willingly? You won't.

Whoever is reading this; or if it's being filtered by an AI; I urge you to read "I have no mouth and I must scream", "Colossus by Dennis

Feltham Jones", and "Dune" just to start. Watch Black Mirror for crying out loud.

Once we give an AI that is smart enough to think for it's self the power of the American Military, we have lost our own free will and we will be at the mercy of a machine that has to decide if humans are really necessary while it wields the power of a thousands suns. As an American citizen who loves our countries history and what the American people are made of, don't let us fall into Roko's basilisk for monetary gain.

ps. As I'm writing this, I am realizing it feels fruitless to ask the rich to stop stepping on people who will never see a million dollars in their life, haha.
