General Comment

Google and other AI companies are trying every trick in the book to steal content creators work without paying for using their copyrighted content. This is not a national security issue but an information heist!

This can be easily proved by the way that Google regurgitates content creators written content to earn money either by getting people to stay on their site looking at ads or by directing visitors to affiliate links which they will get paid for. This isn't about security it is about making more money.

There is a big difference between training AI and linking to the creators in a meaningful way who provided the information and stealing their work and passing it off as their own.

All that is now happening is that we have a monopoly such as Google that is out of control who has broken the open web to such an extent that ordinary creators can barely be found in the search results. The people who are not shown are major corporations or forums such as Reddit who Google conveniently struck a deal with. I would expect that once they have sucked that forum dry of information that will disappear as well (there is a reason why their share price is dropping like a stone).

Even worse the information that they are providing is incorrect a good percentage of the time meaning that ordinary people are acting on incorrect and sometimes dangerous information.

This will of course come back to bite AI companies in the end because as creators disappear and stop producing content it will be impossible for them to feed their AI with new information. This is a more serious national security concern.

It is imperative that we stop a few large technology companies controlling everything because it won't just stop at content creators but governments as well.
