## General Comment

To Whom It May Concern,

AI deepfakes are a hazard in today's world and I urge the powers to be to NOT make deepfakes legal.

Deepfakes are used to ruin reputations, careers, and families. With deepfakes, anyone can send a convincing video of a private or public figure doing something or saying something they would not do or would never say to ruin them. Research demonstrates that the rate of a lie moves faster than the truth, and more people are inclined to believe something the more they see it whether it is true or false. Most people do not have the bandwidth to combat a fake video of themselves and those that do will still have a public that widely believes the deepfake is real.

Deepfakes have also been used to terrorize and destroy women and children. Men in Muslim countries have created deepfakes of private citizen girls and women and put them in pornography, leading to honor killings of girls and women who had nothing to do with those images being created of them. In the USA, men use deepfakes as a form of revenge porn, to terrorize women out of the public space and dehumanize them so that people don't see them as "real." States across the country are introducing bills to add deepfake pornography to their child pornography laws since pedophiles have used deepfake technology to place images of children in the real world into new renderings. Anyone's child may be targeted for deepfake pornography, entirely without the knowledge of either the child or parent until much later.

As far as the argument of Free Speech goes, deepfakes are a form of defamation, of libel and slander in a video form. Everyone has the right to express their views, but our defamation laws are to balance that right to protect careers, reputations, finances, and health. People who have deepfakes made of them without consent risk losing their livelihood and may have their lives threatened due to the views expressed with their image that is not their own.

I urge you to NOT legalize AI deepfakes and make strict laws and guidelines on the grounds of protecting the public from "computer generated defamation."

Thank you for your consideration.

Sincerely,

Janet Sasaki
