General Comment

There is no ethical use of AI, and I suspect the current Administration already knows this. AI requires a tremendous energy output, which will only accelerate climate change. I strongly urge this Administration to concentrate its usage of AI solely on those applications which will directly benefit human beings, rather than corporations.

I advocate strong and sweeping regulation on the usage of generative AI specifically. I ask for legal recompense to all creatives whose work was scraped by AI corporations without their knowledge and consent, and without any compensation given to them for the labor of training LLMs which are now being used to replace them and steal their livelihoods. I ask that restitution be given to all individuals from the Global South who were paid poverty wages to ensure these LLMs were free from images of violence and abuse before these generative AI services were unleashed upon the general public.

I ask for regulations preventing AI chatbots, summarizers and assistants from being stuffed into every software service and the price gouging that accompanies these unwanted "upgrades." I ask that just as we have right to repair legislation, that we now as individuals be given the option to deactivate and remove all AI from software, from browsers and from social media sites.

I demand laws requiring explicit and clear labeling of AI content on all platforms, and legal penalties for those who continue to spread damaging misinformation through the use of AI-generated images.

If the United States wishes to be a leader in the AI sector, then I encourage the United States to thoroughly investigate any and all AI service providers, not solely from an ethical standpoint, but to vet the accuracy of these providers' claims regarding what their services can actually do (versus what these companies hope or wish AI might someday do). I encourage the United States not to embarrass itself nor to be deceived in its rush for supremacy in a technology that may be nothing more than lies and empty promises.
