General Comment

Comment on AI Action Plan

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

Both government entities and private sector organizations are crucial for the advancement of AI innovation. Government agencies such as the NSF have an important role to play in supporting the development of AI technologies that serve pressing societal needs but are less likely to be prioritized by commercial developers. Innovative AI tools that support the educational needs of all children, especially children with disabilities, are essential for growing and maintaining an American workforce that is globally competitive. Schools, both public and private, do not have great financial resources. Therefore, private sector developers may not choose to invest their efforts in technology for education. However, government agencies can afford to take a long view, investing in the future of the United States of America. I strongly urge that the AI Action Plan will create policies that promote human flourishing and in turn, economic competitiveness, by defining a major role for government-sponsored research in AI for education. Partnerships between government and the private sector are likely to be part of these policies, but government must take the lead.
