## General Comment

Dearest National Science Foundation,

I write to offer my perspective in respect to the request for public comment regarding artificial intelligence.

As per the prompt, I am specifically interested in sharing my views on the “application and use (either in the private sector or by government)” of artificial intelligence.

To be clear, this is coming from a human, not a man-made machine gone mad.

I’m not interested in living in a world where we have surveillance bots inside the halls of a state legislature, like we saw recently in New York, keeping an eye on everyone to make sure everything is as it should be. I’m not interested in living in a world where such surveillance bots could be led by artificial intelligence, which is used to discern the people nearby who may be a threat because of a certain thing they uttered.

I’m not interested in living in a world where artificial intelligence could easily be deployed for nefarious purposes on internet systems owned by the richest man in the world, who could control them and has no loyalty to my country.

I’m not interested in living in a world where artificial intelligence is used in the public sector in a manner similar to what was previously used in the private sector, cutting away at peoples’ livelihoods, faith in government and safety nets because of who is currently in power.

I’m not interested in living in a world where artificial intelligence is used in the private sector by controlling their products to disobey requests from their users, as has been the case with some autonomous vehicles.

I’m not interested in living in a world where artificial intelligence chatbots have been used to instruct or encourage humans into harming themselves.

I’m not interested in living in a world where artificial intelligence could be used to start and continue to execute an internal facing battle that further pits our great nation apart because a simpleton is in power.

I’m not interested in living in a world where artificial intelligence is used in our elections, day to day governance, journalism, music and so many other critical activities which require human empathy and understanding.

I’m not interested in living in a world where artificial intelligence could be weaponized to eliminate dissent, creativity, inspiration, love, and thought because such things are a threat to the party in power.

I’m not interested in living in a world where artificial intelligence could easily be used to spy on every single one of us right now using the device all of us pick up first, last or both, in the day.

Instead, I want to live in a world where artificial intelligence is used sparingly and with discerning precision.

I want policies and laws in place that use artificial intelligence to find cures for cancer, Alzheimers and countless other horrible illnesses in the world.

I want policies and laws in place that use artificial intelligence to help solve complex problems like ending world hunger, war and disease.

I want policies and laws in place that use artificial intelligence responsibly.

I want policies and laws in place that put artificial intelligence in the backseat, behind the interests of humans.

I'd venture a guess and say I'm not the only American who wants to live in the latter world. Alas, I know which direction you're heading. Prove me wrong.
