General Comment

In order for the United States to stay a place of equal opportunity it needs to honor the right people have to the fruits of their own labor. Retaining copyright is imperative for allowing Americans to dictate how the things they create are bought, sold, or used. Removing that right and handing it to a corporation, for profit or otherwise, is displacing that labor and abusing it, passing on the benefits and profit off to another without compensating the original contributor.

AI is a useful technology but it should not succeed at the cost of the American people, creating major financial harm to the contributors it collects from without permission or compensation. If technology cannot survive without infringing on the rights of others, or was built to survive on violating those rights, it should not exist.
