General Comment

Artificial Intelligence, or rather LLMs, need to have strict guardrails in order to prevent doing more harm than good. Already, many jobs are being lost to it, information is being muddled, our data is at risk of exposure, criminals are using it more than ever for scams, and the threat of deep fakes will ruin lives and obstruct court processes with doubts of whether evidence is even real or not.

Worse, much of this so-called AI is built on stolen data in the form of copyrighted artworks, writing, papers, and sound. Who are we if we don't even own what we create? It is imperative that the rights of the people are put BEFORE the "rights" of the companies.

Companies have NO right to take what doesn't belong to them, all for the singular purpose of making money. No one benefits from the creation of fake books. No one benefits from a program doing all the work of a research paper when it harms the intellectual health of those using it. It will cripple our education system when it's shoved into every lesson for youth to use as a crutch in order to not learn to do the work themselves. It is actively being used to replace our very culture. What's the point of art if not made by humans? The internet is currently flooded with millions of generated images. Fake "photos" showing animals or places that don't exist but are labeled as fact. At what point will it be impossible to know what's fake and what's real? When the information we turn to is polluted with false data that AI conjures, which is it proven to do (I was told by AI that limes were both extremely acidic and totally not acidic), how will people trust anything? It is actively deteriorating all credibility of anything we see. At what point will people not believe a televised address if AI can 100% make it look real? Or worse - people do believe it and it's 100% false. The danger is insurmountable. It is horrific in scope and should not even be in the hands of the public.

I ask at least this: Do not let AI companies take and use whatever they want. Artists own their art AND the data is created by existing online. Authors own their word. People own their family photos and their own faces. News outlets own their information. AI companies, if they are to do business, MUST be restricted to only using data they pay for the rights to use, or are already public domain. If they cannot make a business without doing this, they do not deserve to be in business at all.
