## General Comment

Dear President Donald Trump and United States Government,

We, Stop AI, would like to tell you that what you are doing is wrong. Funding and authorising the development of Artificial General Intelligence (AGI)—an AI system that is slightly more intelligent than all human experts across all domains—and Artificial Superintelligence (ASI)—an AI system that is many orders of magnitude more intelligent than all humans combined, i.e., a god like AI system—threatens the extinction of all life on earth. This is a violation of the first three inalienable rights of the US Constitution: life, liberty, and the pursuit of happiness.

Experts in AI warn that the risk of extinction from AI is very real. Geoffrey Hinton, a Nobel Prize winner for his work in AI, says, "I actually think the existential risk [AI causing human extinction] is more than 50% [1]." Sam Altman, the CEO of OpenAI, said "AI will most likely lead to the end of the world, but in the meantime there will be great companies using machine learning [2]." In 2023 2,778 cited AI researchers published a poll with aiimpacts.org that put their guess at AI causing human extinction at 19% [3]. The risk here is that AGI/ASI becomes the new most intelligent species on earth, and as the new most intelligent species it may then want something that would inadvertently lead to our extinction similar to how we have caused the extinction of many less intelligent species, and many experts agree you can not turn off an ASI if it goes rogue [4]. The benefits of AGI and ASI are not worth the threat of extinction, especially if we have no way of empirically knowing what the probability of extinction from AGI/ASI is. Stop this insane arms race with China and Russia to build something that will kill everyone on earth.

There is no way to know for sure that AGI/ASI will never cause human extinction or permanently disempower the human species, so we demand the following from the US government now:

- 1) Create a new amendment to the US constitution that permanently bans the development of Artificial General Intelligence (AGI) and Artificial Superintelligence (ASI).
- 2) Ensure human workers are not replaced by AI systems if they do not want to be replaced.
- 3) Ban the use and creation of AI-generated imagery, text, video, and audio.
- 4) Ban the use of AI in the creation of biological and chemical weapons.
- 5) Ban the use of AI in weapons systems.
- 6) Include a citizens' assembly of randomly selected US citizens in the federal legislative branch.

Sincerely,  
Stop AI
