LearnerStudio's Commitment to Human Flourishing in the AI Action Plan

LearnerStudio appreciates the Trump Administration's foresight in initiating the development of a comprehensive Artificial Intelligence (AI) Action Plan, as outlined in the Presidential Executive Order of January 23, 2025. We recognize this pivotal step towards ensuring AI's transformative potential directly enhances American economic strength and human flourishing across America. We are dedicated to contributing to a future where AI empowers individuals to reach their full potential, strengthens the fabric of our communities, and reinforces the core tenets of American values. As the Administration has rightly recognized, America is strengthened when it leads the world in ensuring that AI promotes the skills and dispositions that Americans will need in the future. We applaud the Office of Science and Technology Policy's (OSTP) request for information through the Networking and Information Technology Research and Development (NITRD) National Coordination Office (NCO) of the National Science Foundation, as it opens a vital dialogue to define policy actions that prioritize human flourishing and maintain America's AI leadership.

Defining Human Flourishing

Human flourishing, as envisioned through American values, relies on enabling the interconnected pillars of hard work; personal responsibility; accessible opportunity; and strong, connected individuals and communities. AI must be leveraged to strengthen these pillars by: creating pathways to good jobs and economic stability and growth, strengthening strong social bonds within and across families and communities, extending access to high quality education and skills development to fuel American innovation and global competitiveness, and ensuring security and sovereignty in the age of AI.

Prioritizing Human Flourishing Through Uniquely Human Skills in the AI Action Plan

AI is poised to have significant impacts on everyday life, careers, and communities. To ensure that America continues to lead the world in global competitiveness, the AI Action Plan must prioritize not only technical security and preeminence but also strengthen the widespread development of uniquely human skills, i.e. the skills necessary for human flourishing in an AI-driven world.

To that end, the AI Action Plan should:

1. Prioritize human flourishing by:
 - a. **Establishing comprehensive guidelines and frameworks** that clearly define and prioritize the development of AI literacy and readiness skills across all educational levels (PK-12, higher education, and workforce). Americans must not only understand AI but also be equipped to navigate its complexities, lead its development, and compete with their human advantage so that America and its workforce and communities are strengthened.
 - b. **Investing in enhancing educator roles and preparedness** to effectively integrate and leverage AI into teaching and learning. This investment will enable educators to effectively "be in the loop" on AI implementation, and to better develop in young people the future-proof skills that enable them to have good jobs, support their families, and contribute to American society.
 - c. **Promoting the cultivation of essential human skills** such as critical thinking, discernment, communication, adaptability, collaboration, creativity and

innovation, leadership, lifelong learning, digital literacy, ethical reasoning, perspective taking, and the ability to form strong human relationships and community connections – even as AI “agents” begin to take on more roles in our world.

- d. **Supporting strategies that equip Americans to not only understand AI but to actively shape its development and applications**, including quality, efficacy and ethical use of AI, leveraging these unique human strengths to ensure American competitiveness and community strength.
2. Implement human-centered AI governance:
 - a. **Create an advisory board** dedicated to ensuring AI development remains human-centered, prioritizing humans in the loop to ensure human flourishing, and avoiding bias in underlying models or unintended negative consequences.
 - b. **Mandate that AI development aligns with fundamental American values and freedoms**, ensuring it serves individual liberty and community flourishing.
 - c. **Develop and enforce ethical guidelines and regulatory frameworks** that protect Americans’ data sovereignty, mitigate bias, ensure privacy, and promote individual liberty and freedom in the age of AI – while balancing nimbleness and adaptability given rapid changes in this sector.
3. Safeguard American jobs, relationships, and freedom:
 - a. **Implement policies that ensure AI enhances, rather than replaces, American jobs and human connections**, fostering growth and development for all.
 - b. **Implement strong national security measures** to ensure AI development aligns with American interests, safeguards sensitive information, and prevents undue foreign or special interest influence.

Cultivating Human Flourishing Through Collaborative AI Development

LearnerStudio believes that by implementing these priority actions and engaging in cross-sector public-private partnerships, the AI Action Plan can effectively harness AI to cultivate human flourishing for all Americans. We are committed to supporting the administration’s efforts to create a future where AI strengthens our economy and country by enhancing our education system, thereby empowering individuals to live fulfilling lives in strong communities. Through collaborative efforts, we can ensure AI serves as a catalyst for increasing human potential, reinforcing our core American values. We look forward to contributing to the development of this crucial plan and working together to shape a future where AI drives innovation and prosperity, and centers and enables human flourishing.
