General Comment

As someone who has grown up in the whole Information Age (Born 1989), someone who has gone from a farm house with a second-hand Apple PC that used 5 inch floppy disks to now working from home using the internet to make sales while also keeping in contact with far off friends, I have been well aware of the speed at which technology has grown by leaps and bounds over the last 35, closing in on 36, years of my life.

Artificial Intelligence, Machine Learning, seems like it is in a time similar to NFTs just a few short years ago, or the general internet when I was a young fellow. People have swallowed so much hype about it they are about to burst, and expect it to do absolutely everything, but people actually commonly familiar with it are much more aware of it's downsides and pitfalls.

People expect AI systems to be able to do everything and always be right, and that is not the case. And dumping all the information one can to teach it does little more than contaminate it with the whole of the incorrectness and misinformation people have to offer.

This seems a bubble about to pop, an answer searching for a question, and overall something people who put a lot of money into without a pay out are struggling to justify, to sell to the next person so they themselves are not the ones suffering a loss.

I am not so foolish to say that such systems have no use at all, but for the common person it's uses are much more narrow and niche than people selling them would have us believe. And attempts to remove proper oversight and move forward without regard for ethical concerns only allows those just chasing a quick sell and split to hurt Americans.

To that end, I do not see the point of disregarding a previous choice to approach the matter calmly and with a level head simply to be the first to a finish-line that isn't built yet. I strongly feel that before anything else, the approach to AI Development should be assured it is for the betterment of our people, not simply to say we made something bigger and more bloated.

In simple terms, I say put Ethics, Worker Protections and the Safety and Privacy of my fellow Americans first and foremost
