General Comment

Protect the rights of American creatives from predatory Generative AI companies. Generative AI operates by stealing the work of artists and authors without compensation or permission, scanning it for patterns, and replicating those patterns through an algorithm. It cannot function without massive copyright infringement and theft of intellectual property. It is a massive, massive risk to privacy and security. From large creators like Hollywood and music studios to individual independent artists, everyone's work is currently being stolen and used to make a lower-quality product that attempts to replace them in their line of work. No consent is being given, and requests to have one's data exempted from scraping are routinely ignored. Any laws passed that involve generative AI MUST include restrictions on scraping and on training that require AI companies to get consent from and provide compensation to the original, human authors or artists of any data they wish to use to train their AI. This is the demand of the American people: keep our creators safe. Do not sell the people of our great nation out. Additionally, it must be legally required of anyone posting or selling AI-generated content that they clearly label it as such, and pretending that AI-generated content is human-made should be considered fraud.
