Quality Plus Engineering AI RFI Reponse

To: National Science Foundation

From: Quality Plus Engineering (Q+E)

Subject: Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

Date: March 15, 2025

This letter serves as our formal response to the National Science Foundation Request for Information on the Development of an Artificial Intelligence Action Plan issued on February 6, 2025.

To address the following actions, the U.S. must prioritize leadership in AI while balancing innovation with responsible governance, using current risk frameworks, and global best practices. We suggest the following policy actions focusing on the risk assurance of AI models:

- **Enhance AI readiness in national defense:** Integrate AI assurance into intelligence, logistics, and cyber operations prioritizing explainable models for battlefield decision-making.
- **Implement a risk-tiered regulatory approach:** Develop a risk-tiered regulatory categorization model applying stricter oversight to AI systems in critical infrastructure and law enforcement.
- **Mandate sector-specific AI explainability standards:** Require post-hoc explanation techniques for high-risk AI applications in critical infrastructure, healthcare, finance, and national security to ensure stakeholders understand AI decision-making processes.
- **Develop sector-specific risk assurance frameworks:** Create a Federal AI Assurance task force to oversee critical AI lifecycle audits including verification and validation.

- **Develop professional credentials for AI auditors:** Develop professional licensing such as Professional Engineering for conducting risk assurance audits of critical AI systems.
- **Expand the NIST Risk Management Framework:** Include privacy, cybersecurity, and AI safety under integrated Enterprise Risk Management (ERM) model.

Thank you for the opportunity to respond to the RFI. Should you require additional information or clarification, please contact:

Greg Hutchins PE CERM
