General Comment

AI can and will be essential to small businesses in the future, but that comes with the caveat of large corporation and tech giants like OpenAI and google being constrained within the same rules as everyone else.

Please do not let these companies waive the current copyright status of works/data in order to further fuel their advantage. Copyright exists to protect the works of the average American and they're trying to circumvent it wholly. This is beyond anti-competitive with their argument for allowing the use of copyrighted data to train their models without any sort of compensation. It's anti fair use, and anti business for everyone involved. What incentive is there to create if everything will be used for the sake of power and profit from the few.

Thank you for taking the time to read, and I do hope you consider the ramifications for the future generations to come as well.
