General Comment

I'm writing this comment as a concerned citizen, in regards to the policies that could potentially be enacted in regards to AI-related regulations, (and/or lack thereof). To put it simply, by giving companies the ability to take from people's work without getting the copyright for said work, it is stripping the United States culture, creativity, and vision. It puts people out of jobs - hundreds of thousands of people across many different fields; Film, Electronic Entertainment, Traditional artists, contractors, and a vast number of other fields would be hit hard, irreparably.

Allowing Artificial Intelligence, and companies who develop this AI, (OpenAI, Google, etc.) full access to people's work with no compensation or regard for their copyright and creative input. Which has been something said companies are trying to rally for, is in essence making theft of property and creative works legal in the United States, as long as the people stealing are corporations.

Corporations like these are using scary buzzwords like 'a threat to national security' because they're trying to appeal to emotion, with a false sense of authority on that matter. These corporations do not know more about national security than the government itself does no matter how much they flaunt the word around, and they do not actually have the best interest of the country or it's security at heart. All these corporations want to do is make it easier for them to profit off of other peoples work without obtaining the copyright. If anything, giving companies this power, which they will then in turn package and sell to the people, will be worse for national security.

If these companies want this data, they should have to go through the same process they do to obtain other user data - by getting permission directly from the people they're taking from. Otherwise it's no different than letting people waltz into your home and take your stuff without permission so that they may recycle it, splice it, and turn it into something else only to turn around and re-sell it. As someone who was born, raised, and grew up in the United States, who was told that this was a place of opportunity where people can work to achieve whatever they want to - the notion that companies can take the fundamental freedoms we enjoy as citizens, strip them, rewrite laws that allow them to do so, and sell it back to me is frightening.

I write this comment simply to give my thoughts on the matter, and to discuss my fear and frustration that such ideas can even get this far in the first place as they go against the very core of what the United States is supposed to be, what it was founded to be. I am 100% FOR regulating AI companies and requiring them to go through standard process in order to get data from individual citizens, I think regulation is very important to prevent theft, bolster security for individuals in the country, and make sure that companies do not get to steal in such a way, as other regulations have made sure they don't in the past with other data protection.
