

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 14, 2025
Status: [REDACTED]
Tracking No. m89-d2hd-77c4
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1516

Comment on FR Doc # 2025-02305

Submitter Information

Name: Anonymous Anonymous

Email: [REDACTED]

General Comment

The definition of shoplifting: "the act of knowingly taking goods from an establishment in which they are displayed for sale, without paying for them" is equal to data scraping without consent or compensation and competing directly against the authors, creators, individuals and beyond. Generative AI at it's current stage does not respect copyright and sets a dangerous precedent for the future and for more abusive technologies and laws to be passed. A stranger could directly snap a photo of someone and create an AI image of them without consent and extort money, a malicious virus could be easily coded, a recipe could lead to deaths, a falsely generated image could spark major controversy, some have even died from chatting with bots, consuming poisonous mushrooms, been laid off and worse. Generative AI also uses a lot of natural resources - According to the United Nations Environmental Report, nearly two-thirds of our world's population experiences severe water shortages for at least one month a year, and by 2030, this gap is predicted to become much worse, with almost half of the world's population facing severe water stress. To avoid this fate, the report said, water use must be "decoupled" from economic growth by developing policies and technologies to reduce or maintain consumption without compromising performance." - Forbes.

Schools are a place of learning, using generative AI robs children of valuable motor skills and critical thinking.

Fashion brands used "diverse" AI models to represent diversity, but this only makes it more challenging to get fair representation for minorities.

I am against data scraping and generative AI.
