Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1529

Comment on FR Doc # 2025-02305

Submitter Information

Name: Alex Graham

Email: [REDACTED]

General Comment

At this time, so-called “artificial intelligence” is not ready for the majority of tasks that are put before it by the public, as it has no real UNDERSTANDING. It is not intelligent by any metric. Just as a cookie cutting robot can cut dough on a conveyor belt that is at a specific location, speed, and dough density, so too can “artificial intrlligence” like Grok and ChatGPT answer questions and perform tasks correctly when asked questions pre-selected to match their training data perfectly.

Humans trust authorities, and these AI programs are given authority by their makers, despite being dead wrong, consistently, when asked questions the creators did not anticipate.

It regurgitates what humans have already made, without the nuance or contextual awareness of a human looking at the problem and development to give it actual understanding has stalled.

Do NOT give AI more power, or reach. Give it MORE legal limits if at all possible.
The makers of AI cannot be trusted to represent its capabilities accurately to laymen.
