General Comment

AI in creative fields is going to destroy human creativity. Personal creative works are important for the human experience. AI output is not what we should be prioritizing in illustration, writing, voice acting, animation, or any like creative fields. Such practices need to be disincentivized for the sake of creatives and consumers alike. The loss of arts and human made craft will be the largest loss of humanity we can imagine. Cave paintings were made by hands, not by machine. And that is precisely why we marvel at their creation to this day. Humans have always created art and we need to be able to do so in the future. The present is preserved by the interpretation of artists living today.
