General Comment

AI companies are now trying to change the rules. Knowing that their technology is losing in the courts, they now want to change the laws in able to feed data to a notoriously bias, power hungry, inaccurate and unprofitable technology.

The reason that Google and OpenAi want to stay competitive with China is a farce. They do not want to be held accountable to the millions of creators they have stolen from. GenAi as we know is a technology that has proven to be useless and ultimately unpopular. The business that are "pioneering" Ai are built on monstrous overvaluations are not even close to making any sort of real profit. Backing them is risking bankrupting anyone organization that chooses to back them.
