General Comment

What Ai big tech companies and CEOs want is power, money and dominance over humanity and people. They don't care humanity, they don't care to hurt damage the world in general (for example the impact in the world for the indiscriminated use of resources like energy or water). They don't care human artist or human art. in fact they want to kill human art . They love money and power more than anything.

They can sell the humanity, including his dignity and the world to machines by money and power.

In the topic of art (my case)

Ai technology should have never been developed in the way they did. They should have respect the copyrighted material and never use this material to train AIs models without permission. So Ai models we are seen today are corrupted and they shouldn't be in the public for use in any kind.

Any human artist won't be ever able to compete to a machine creating thousand and thousands of peaces of art per second in the same market. In that path, human art is destined to dye. And yes. They stole many and many copyrighted human materials created by humans Wich in some cases the creation process is of years to train AIs models, and with "this" stolen human material, they want to kill those same human artists and new coming artists since this point of time and after ever. I repeat: any human artist won't be ever able to compete to a machine creating thousand and thousands of peaces of art per second in the same market.

In general: The negative impact of earnings in those human artists is so big that has no number (which in fact is against fair use doctrine).

There is no compensation even if the artists accept a fee for let them use their material to train AIs model.

If machines create art content by thousand and thousands, it won't be ever be sustainable for new artists, even with a fee, human art will be destined to dye.

So here in terms of art is in game not just a fee to artists to compensate with money the use of their art to train AIs models, it's not just copyright infringements that these big tech and CEOs want to avoid. Is about human art and giving the machines the power and influence that art has been had in all humanity and give this power to machines to lead humanity. I think humanity most lead, not machines.

This will occur if the laws protect this crazy ambitions of people without any ethics. The choise about what is about to happen from this moment and that will impact next humanity generations is today.

I hope the government take the right choise and protect the must vulnerable people and their rights over the ambitions of people who are never satisfied with the billions they make, and they power they have, even if they have more money to pay hundred of lawyers. I hope you take in mind THE JUSTICE.

Psalms 37:28 states, "For the Lord loves justice; he will not forsake his faithful ones. They are preserved forever, but the children of the wicked shall be cut off".

Thanks.
