## General Comment

I implore the National Science Foundation to NOT move forward with letting tech companies like Google and OpenAI break copyright laws by training off of content they do not own, especially content that is legally protected. This will end up causing great harm to many industries, especially in the creative sector where many people are already displaced and trying to find work. Many have voiced concern over their work being used to train models without their consent or any compensation. We need to ensure that any protections put in place, and that these tech giants should not abuse their power or influence. This is hardly a matter of "national security". Copyright law must be protected, otherwise irreparable damage will be done to the economy and nobody will have ownership of anything.
