General Comment

I'm against further development of AI tools which are build upon copyrighted content.

ChatGPT, OpenAI, Midjourney, Grok and alike text/image/video/audio "AI" services abuse peoples - especially hobby and professional artists - properties and abilities to train their generators and be able to produce an on demand "remix" of peoples usually copyrighted content.

Which means: The companies running these tools commit a massive copyright violations AND THEY GET AWAY WITH IT!?

If a single person dares to abuse copyrighted material they usually face a fine of hundreds or thousands of dollars, sometimes might even go to jail for it. But if companies does that it's ok? How is that fair?

These tools are by now a massive issue as people use them to partake in art contests (like the Trading card Game illustration contest of "The Pokémon Company international" in 2024), to effortless produce texts for schools and other cases where personal abilities are wanted.

Tools like that make people lazy, they fake their abilities, causes them to commit contest fraud, fakes their abilities on the job/during job search, causes pupils/students to not acquire true abilities as they these days frequently just throw their homeworks into the generator and tell it what to give them.
