General Comment

I am a photographer. I have stopped uploading photos to my own instagram because Meta has not allowed me to opt my images out of their dataset for their 'AI'. Companies like Meta, OpenAI, and Google should not be allowed to use my artwork for their own profit. My artwork is a product of MY labor, and if the corporations wish to use it, they will need to compensate me for a license. Anything short of that is theft.

OpenAI and Google claim that it is a national security risk if they are not allowed to use my copyrighted work in their 'AI' model. This is untrue. Generative 'AI' technology itself is ALREADY a national security risk:

1. Generative 'AI' technology is now the leading source of disinformation according to Google's own researcher. (Source: <https://www.404media.co/google-says-ai-now-leading-disinformation-vector-and-is-severely-undercounting-the-problem/>)
2. Generative 'AI' technology has caused deepfake nudes of minors to spread in high schools. (Source: <https://www.404media.co/what-was-she-supposed-to-report-police-report-shows-how-a-high-school-deepfake-nightmare-unfolded/>)
3. Generative 'AI' technology enables scammers to create more convincing scams than ever before. (Source: <https://www.404media.co/joe-rogan-taylor-swift-andrew-tate-ai-deepfake-youtube-medicare-ads/>)

I am asking the White House to deny companies like OpenAI and Google from using my copyrighted work in the datasets for their 'AI'. I am asking the White House to put a stop to generative 'AI' technologies if they wish to minimize an actual national security risk.
