General Comment

Scraping copyrighted content or intellectual properties from the internet or other places does not just affect Americans, but the entire world.

They cannot assure that the place they are stealing these creative works to train their AI's would even be legal, as they would not have the representation or laws supporting them to do so in other countries.

Doing this is directly profiting by theft from individuals, who are unable to defend themselves from large corporations. Copyright and intellectual property laws exist for a reason. Generative AI should not exist unless they pay for all the information they have already stolen, and if they're not willing to do so, all AI models should be permanently deleted.
