General Comment

The Artificial Intelligence Action Plan that this request for information ([Request for Information on the Development of an Artificial Intelligence (AI) Action Plan, Docket #2025-02305]) details contains several troubling and potentially damaging points of acquiescing to companies working to advance generative AI technologies like OpenAI, that could severely affect Americans of all fields, not just creative ones, due to OpenAI's stated necessity to train its large language models on copyrighted material without express permission.

As an example, if OpenAI and other AI companies are allowed unfettered and unchecked access to copyrighted material, this would include not just works of art, writing, and music, but also things like software. Without strong regulation of this technology, nothing is stopping anyone, including other nations from using the excuse of "I'm training a generative AI model" to claim right to any intellectual property, including the software of companies like Open AI.

Also, as a technical writer that professionally works with privacy and security documentation, I am concerned that allowing companies like Open AI to train indiscriminately opens the door to them inadvertently storing and using sensitive personal information of American individuals, opening them up to security breaches and identity fraud if that information is mishandled or appropriated by third parties.

Please consider these points ahead of any work on the proposed action plan.

Please consider what this research implies regarding the effectiveness of this regulation in achieving its stated purpose.

Sincerely,
