General Comment

All automation is disruptive, but not all automation is good disruptive, especially when the economy is ill-prepared to take the load of unemployed people who have had their jobs, industries, and entire career paths eliminated.

Current AI software is built on the stolen copywrited products of large and small businesses. It is the equivalent to large-scale industrial espionage, using the products they created to replace their labor as a cost of business.

We don't need to be at the forefront of automation, we need to through our weight behind the American worker, be that blue, white, or pink collar.
