General Comment

Any AI action plan should first consider the harm AI has already inflicted on millions of publishers and businesses across our nation. Google's use of AI Overviews in search has reduced website traffic for small businesses by 75%+, and this is causing the cataclysmic collapse of the digital economy. Google, a company recently convicted of antitrust violations, should NOT be permitted to continue to scrape and steal our content for their sole benefit. If Google can pay reddit \$60 million a year to train their AI with, then it only makes sense Google can license content from everyone else.

Attached is a graph highlighting the substantial loss in traffic independent small businesses have endured already as the result of AI Overviews. This study was conducted by Seer Interactive <https://www.seerinteractive.com/insights/ctr-aio>

Please keep in mind small American manufacturers have been severely harmed by Google's AI Overviews. Also note the UN study which noted that China currently controls 25% of the global manufacturing marketshare and is expected to rise to 45% by 2030. In 2030 the USA's global manufacturing marketshare is expected to decline to 11%. Winning the AI race, by permitting Google and other AI companies to steal their content and use for their sole gain is not only wrong, but is also a national security concern since it will drive more specialized small manufacturers out of business.

Any AI action plan should call for AI Overviews, and/or other AI elements that divert traffic from external websites, to be immediately removed from Google search due to the widespread harm it is causing to America's small businesses. Does Google want to win the AI race or just strengthen their existing search monopoly to control more information and consumer spending by eradicating small businesses? It's bad enough Amazon, a mega-importer/distributor of Chinese goods, has received \$11.6 billion in local tax subsidies to help them build more warehouses to store/ship mostly Chinese goods from. But to allow big tech to steal our content and traffic adds insult to injury for millions of American business owners trying to participate in the digital economy.
