General Comment

AI cannot create art or even imagine the way that humans can, only spew a mash of colors and words at you that it doesn't even understand. AI image generation WILL and, reportedly, has already been used to create CSEM and pornography of people without their consent. AI video generation will run the same risks, as well as potentially contributing to the flood of information on the internet by making media harder to trust. It is hurting grades by giving students a way to cheat without learning anything. The water usage required to cool the servers hurts the planet.
