## General Comment

Hello,

I am an artist that has been posting online for many years, and while I have yet to fully sell my artwork on the web, I find the proposals made by big tech companies to bypass copyright laws to train their data models to be very concerning.

For the past three years, I have seen many of my peer's works be plagiarized and stolen through people training their works through AI models. Many of my peers rely on their work to make a living and the images that are generated from these AI models are cutting into that. Along with that, many artists are not compensated for their creations being used in these models and can't really do much to get the models to take their works down from the AI models. I understand that it's hard to delete what's already been trained in the model, but companies that are creating AI models are not taking into account the human aspect of creating and are pushing people away from creating art.

Instead of giving companies full control over individuals data, I suggest focusing more on making stronger copyright laws that will benefit individual creators and give them better resources on fighting copyright infringements of their content. One of the biggest problems artists face when confronting AI companies using their work is finding legal council that will help them fight their cases. There have been group lawsuits in the past, but that hasn't stopped AI companies from continuing their practices of stealing people's data.

Another thing I would suggest focusing on is making stronger privacy laws, and make it national. For too long, big companies have been selling our citizens data for massive profits to data brokers and time and time again this has lead to many data breaches. I worry that with all this data AI companies are collecting, how long will it take for a group of hackers to get that data and make it public?

I hope this comment makes sense, and please really consider this before giving big tech companies control over us.

Thank you.
