General Comment

Google's use of AI and AI Tools is a targeted effort to censor and silence small publishers and independent voices that it does not agree with. Allowing this to happen will extinguish open discourse and ideas, effectively leaving a singular big tech corporation as the sole owner of all ideas and influence.

Big tech companies like Google, Meta, and X/Twitter are actively developing AI for complete control of the narrative. United, these big tech companies will dominate and control the understanding of the world around us. This is dangerous to free thought and free ideas. And it squashes independent creatives.

Humans are creative beings and without copyright protections for content creators on the web, big tech will simply take ideas at will. This will basically shut down human creativity as there is no incentive to create any longer. AI and big tech control should not be allowed to scrape and use data that was created by hardworking people to use for its LLMs.

If Google, X/Twitter/Elon Musk, Meta, and Microsoft are allowed to scrape data and use it freely. It is the end of small businesses. Small independent outlets will no longer be able to create and earn. This country was built and is still heavily dependent on small business, and if that goes, then we're left with a sterile product that is void of natural humanity.
