General Comment

AI has incredible capabilities to help advance many fields. However, when it comes to training AI models, I believe there have to be some regulations in place to protect the intellectual property of small businesses and private citizens.

Big Tech is currently using AI to first steal from and then demote the content of business owners who run websites and other businesses online. Once the likes of Google have forced independent websites to stop publishing due to lack of traffic, what content will they use then to train their AI?

The environmental cost of AI is also astronomical, and should not be overlooked.
