

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 14, 2025
Status: [REDACTED]
Tracking No. m89-hdtd-qwpj
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1600

Comment on FR Doc # 2025-02305

Submitter Information

Name: R B

General Comment

"Once men turned their thinking over to machines in the hope that this would set them free. But that only permitted other men with machines to enslave them." -- Dune by Frank Herbert. While machine learning models have uses in specific areas, the current corporate fad around "AI" is an attempt to cash in without making new technology & plagiarize from the entire creative capacity of our species. The ways this is pursued now are unsustainable for both the environment & economy, & the current efforts to integrate with the federal government are an attempt to latch on as a parasite so once investors discover that this is just another scam, the American taxpayer will be left holding the bag. And for what? Most of these systems do the same tasks already achieved through traditional means only worse. AI on search results provides inaccurate information over 60% of the time. Additionally, even now, the "AI" machine learning technology is being used by intellectually dishonest actors to steal people's art, to replace their intellectual capacity, and fill the channels of information with useless sludge. People not realizing that LLM outputs are essentially the computer playing the Turing Test to give a human-like response take obviously incorrect statements as divine revelation. Ultimately, the question comes down to whom the tools are meant to serve; are they meant to serve the working people sustaining our country or corporate interests? Where machine learning programs that are built to assist animators by filling in frames or predict protein folding serve the artists and biomedical researchers & are often quite effective, many others that are intended as some sort of digital cure-all are meant to line corporate pocketbooks and strain our country's powergrid. I suggest that the AI industry that has emerged recently should be gutted and highly regulated, not having access to copyright-protected intellectual property. I hope those in the federal government are able to see this as the obvious bubble it is and push for the regulation the tech industry needs. Of course, with the current government, I doubt this, given that Trump's cabinet is the wealthiest in the country's history and is looking to fleece everyday people in order to line their billionaire buddies' pockets.
