Email: [REDACTED]

General Comment

Generative AI as a technology has been rushed out into production with no thought as to ethics or the vast amount of harm it's done both environmentally and technologically. Every company suddenly needs to jam generative AI tech in everything, slowing programs to a crawl. Internet search engines have become a practically unusable mess with generative AI articles taking up the bulk of the top search results (usually filled with vast amounts of misinformation), and generated imagery crowding out real photos and artwork on image searches. These data models were trained with stolen data across the board, with no compensation given to the original artists and authors. They claim they cannot even exist if they were forced to perform lawfully and ethically, so instead they're trying to demand the laws be changed to accommodate them at the expense of everyone this rushed, half-assed cash grab has harmed. We need to take a big step back and reexamine the technology of LLMs and generative images from the ground up, and figure out a way that it can be implemented with fair compensation to the people whose works are used to train the models, and hopefully reverse the immense damage done to the formerly useful internet.
