General Comment

While there have been many advancements in statistical analysis and machine automation that have made contemporary life a modern marvel, the hype around "AI" is overblown and misleading. There is nothing unique to their process or product that has invented a robot with the capacity for new and innovative ideas. These models are built on the work and taught on the work of human beings who have rights. Further, certain models should be investigated for illegal data gathering practices and violations of intellectual property laws.
