General Comment

We must protect creative careers against Generative AI and Large Language Models. Copyright should be upheld against this technology. The technology is plateauing in its effectiveness, and the attempt to overrules copyright law in an attempt to further its development is a fundamentally unscrupulous and desperate power grab. The current state of AI does not truly improve productivity as promised, and instead is muddying the quality of human culture and understanding with mere approximations of human ability. A quantity over quality technology which stands to weaken us.

Fundamentally, Google and OpenAI have no right to develop their product using the products of others they have no claim to. An arms race with China's AI development is a pretense to steal the rightly owned efforts of millions of Americans and American businesses. Ultimately this weakens trust in our institutions and thereby the strength of our nation. In addition, AI shows worrisome signs of being a market bubble, threatening to pop. The winner of this "Arms Race" may be the nation who refrains from putting all their eggs in that basket, and undermining copyright is akin to shaking that basket.
