General Comment

Companies such as OpenAI are constantly demanding unfettered access to data they do not own, and are trying to skirt the law to get more. Allowing them to do so is not only a breach of most copyright laws, it also seeks to undermine and replace writers, workers, and creatives after unlawfully copying and profiting off of work that is not theirs. They cannot be allowed to continue, and their claims of "wanting to defeat China" are a sham designed to trick you into believing they care about anything other than the money they are making. A machine that does little more than copy works found on the internet and acts like a modern smartphone guessing the next word you are putting in a text message does not deserve free reign to do whatever they want
